

Digital Imaging with *Krita* software

Lesson 6

(Import a photo or other image)

Prepare an Image

either...

Download an image from the web

or...

Upload one of your own to your computer

Can be any kind of image

– a photo, a painting, etc.

Create a new Canvas

>File >New

Make a layer above the Background layer

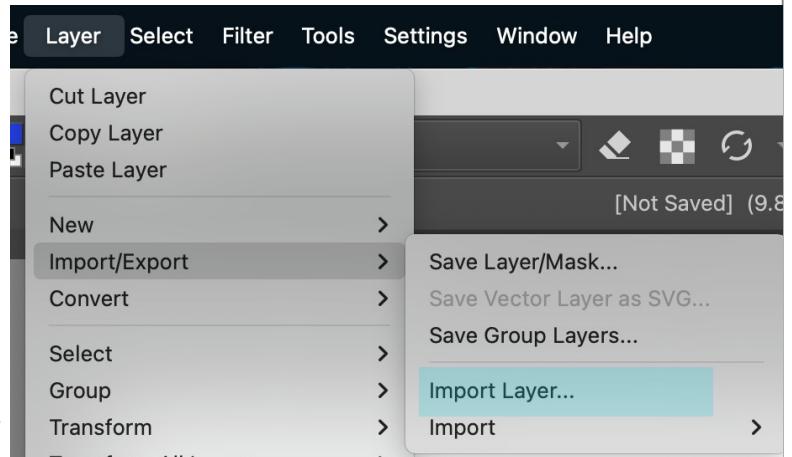

Draw something in that layer

Import your image

On top menu...

>Layer > Import/Export >Import Layer

Browse to find your picture file

Your picture comes in as a new layer
in the Layers docket

It comes in above the current layer

Transform your picture

Your imported picture may be

...too big, or too small, or rotated

Choose the *Transform* icon

(left column of icons; little square with dots)

Click in the canvas to transform your imported picture

Digital Imaging with *Krita* software

Lesson 6

(Import a photo or other image)

Change Layer Order

In the Layers docket

click on your newly imported layer

Drag it to below the other layer

Or use the Up or Down arrows (bottom of Layers docket)
to move it up or down

Do more drawing

Make another layer

Draw something in it

Move layers up or down, etc.

Save your file

>File >Save As
