

## Digital Imaging with *Krita* software

### Lesson 9 (Text)

#### Open/Make an Image

Open a .kra file you have already made

or...

Quickly make a new one

Draw on or fill a layer

#### Use the Text tool

When you make text

it will automatically make its own layer

on top of your current layer

This new layer will be a “vector” layer

To use **Text**...

Choose the “T” tool icon (at top right of Tools column)

In the canvas, click and drag to make a rectangle

When you make the rectangle

a window opens to “Edit Text”

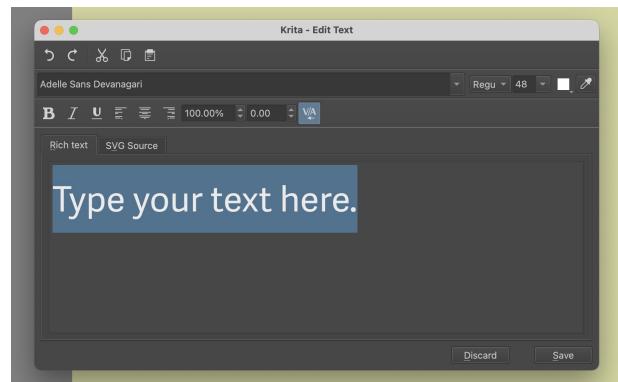

#### Define the text

The text:

Default text is “Placeholder Text”

Click and drag over that to select it

Type some new text

#### Color

The color is whatever is your current color

To change this, click the little color icon

at top right inside the *Edit Text* window

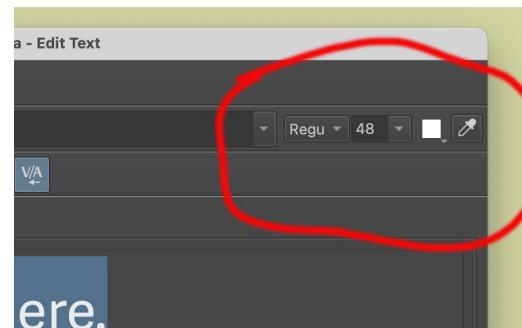

#### Size

Size is whatever last text size was

To change this, click arrow next to the number

just to left of the color box

Select or type a new size

## Digital Imaging with *Krita* software

### Lesson 9

(Text)

#### Font

Font is the “style” of the text

The current font is the name you see at top-left of *Edit Text* window

Click the arrow next to that name

Drag to select a font

Click on “Save” to save all these changes

The changes don't appear on your canvas  
until you hit the Save button

#### **Re-edit the text**

To re-edit some text you have already made...

Choose the “T” tool again

Double click inside the rectangle of the text  
The Edit Text window opens again
